1 Product Overview

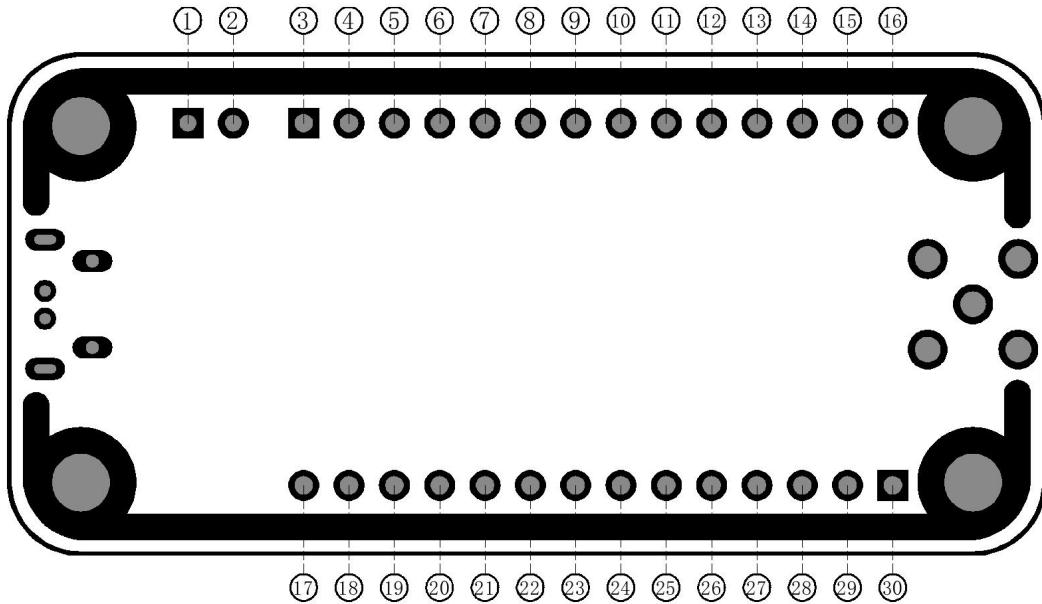

1.1 Product Introduction

The MBL series evaluation kits are designed to help users quickly evaluate Ebyte's next-generation package-compatible wireless modules. Most of the pins on the board are led out to the pin headers on both sides, making it easy for developers to connect a variety of peripherals via jumpers to their needs.

The kit provides complete software application examples to help customers get started quickly with wireless data communication development. Different types of Sub-1G wireless modules can be installed on-board according to customer needs. Supported modules are available in pin-compatible packages for quick replacement.

1.2 Dimensions, interface description

PIN	Defi	Description
1	3.3V	The 3.3V supply leads the pin
2	VCC	The module power supply pin needs to be shorted to pin 1 to power the module
3	REST	The MCU external reset pin
4	SWCLK	SWCLK pin of the MCU
5	SWDIO	SWDIO pin of the MCU
6	GND	Baseplate reference ground
7	PC13	Module Normal IO
8	PA15	Module Normal IO
9	PB0	Module Normal IO
10	PB2	Module Normal IO
11	PB12	Module Normal IO
12	PA10	Module Normal IO
13	PA11	Module Normal IO
14	PA12	Module Normal IO
15	PA9	Module Normal IO
16	PA8	Module Normal IO
17	GND	Baseplate reference ground
18	3.3V	The 3.3V supply leads the pin
19	TXD	Module low-power serial port TXD
20	RXD	Module low-power serial port RXD
21	PB3	Module Normal IO
22	PB4	Module Normal IO
23	PB5	Module Normal IO
24	PB6	Module Normal IO
25	PB7	Module Normal IO

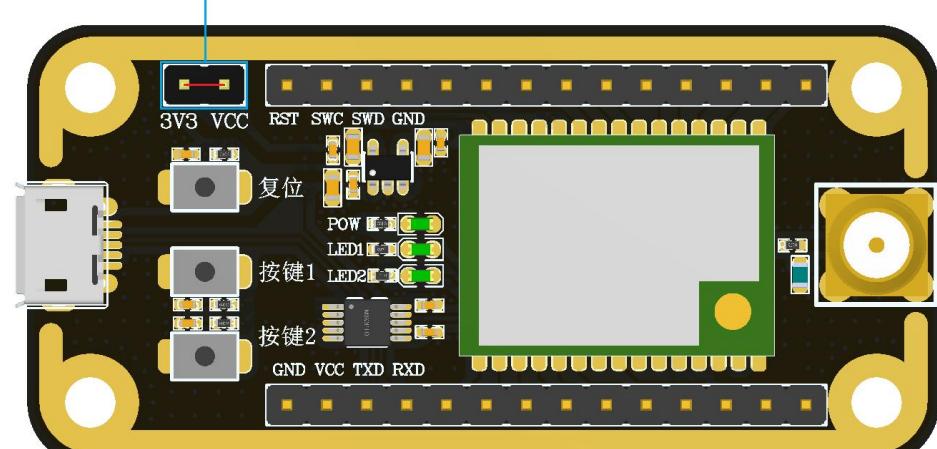

26	PB8	Module Normal IO
27	PA0	Module Normal IO
28	PA1	Module Normal IO
29	PA4	Module Normal IO
30	PA5	Module Normal IO

1.3 Support matrix

	RF solutions	manufacturer	Module model
1	STM32WLE5CCU6	STMicroelectronics	E77-400M22S
2	STM32WLE5CCU6	STMicroelectronics	E77-900M22S

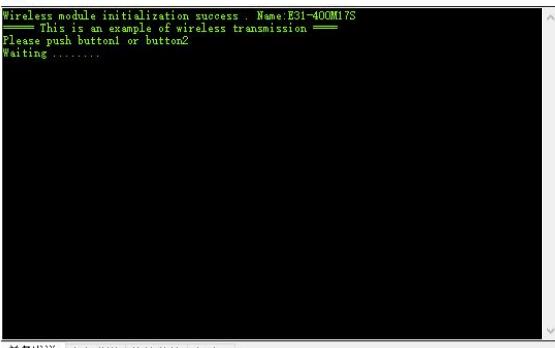

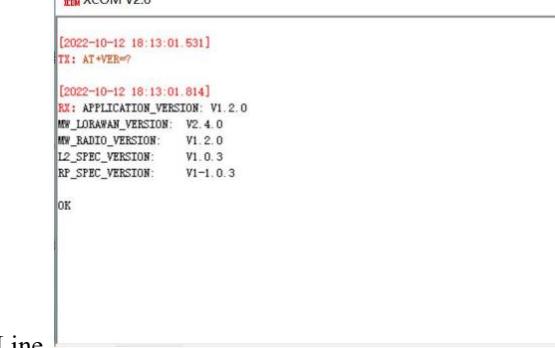

2: Quick Presentation

2.1 Signal cable connection

	Item	Description
1	Power jumper cap	 <p>模块电流测试排针, 使用跳线帽按图示方向短接排针</p>
2	auxiliary	USB cables, antennas, PCs, etc

2.2 Serial port assistant

	Item	Description
1	Device Manager Check the serial port number	 <p>设备管理器</p> <p>文件(F) 操作(A) 查看(V) 帮助(H)</p> <p>DESKTOP-9VV80KR</p> <ul style="list-style-type: none"> IDE ATA/ATAPI 控制器 Jungo Connectivity 安全设备 处理器 磁盘驱动器 存储控制器 打印队列 电池 端口 (COM 和 LPT) <ul style="list-style-type: none"> USB-SERIAL CH340 (COM15) 硬件

2	Serial port software	 <p>The screenshot shows the XCOM V2.0 interface. The main window displays the message: "Wireless module initialization success . Name:E31-400M17S", "This is an example of wireless transmission", "Please push button1 or button2", and "Waiting". The configuration panel on the right shows the following settings: Port Selection (COM53: USB-SERIAL), Baud Rate (9600), Stop Bits (1), Data Bits (8), Parity (None), and Flow Control (Close Port selected). Below the configuration panel are buttons for Save Window, Clear Reception, Hex Display, White on Black, RTS, DTR, and Break. At the bottom are Single Send, Multiple Send, Protocol Transfer, Help, and a large text input field with a Send button.</p>
3	Communication example	<p>Use the AT command to read the version number to see if the module is connected normally, and the AT command needs to check Send New Line.</p>  <p>The screenshot shows the XCOM V2.6 interface. The main window displays the following AT command exchange and module version information:</p> <pre> [2022-10-12 18:13:01.531] TM: AT+VER? [2022-10-12 18:13:01.814] RX: APPLICATION_VERSION: V1.2.0 MW_LORAWAN_VERSION: V2.4.0 MW_RADIO_VERSION: V1.2.0 LZ_SPEC_VERSION: V1.0.3 RF_SPEC_VERSION: V1-1.0.3 OK </pre> <p>The configuration panel on the right shows the following settings: Port Selection (COM4: Silicon Labs CP232), Baud Rate (9600), Stop Bits (1), Data Bits (8), Parity (None), and Flow Control (Close Port selected). Below the configuration panel are buttons for Save Window, Clear Reception, Hex Display, White on Black, RTS, DTR, and Break. A checkbox for Break is checked with a value of 100 ms.</p>

For more information on how to use it, please refer to the module product application note.

Chapter 3 Frequently Asked Questions

3.1 The transmission distance is not ideal

- When there is a linear communication obstacle, the communication distance will be attenuated accordingly;
- Temperature, humidity, and co-channel interference will lead to an increase in the packet loss rate of communication;
- The ground absorbs and reflects radio waves, and the test effect near the ground is poor;
- Seawater has a strong ability to absorb radio waves, so the seaside test effect is poor;
- If there is a metal object near the antenna, or placed in a metal case, the signal attenuation will be very serious;
- The power register is set incorrectly, and the air rate is set too high (the higher the air rate, the closer the distance);
- The low voltage of the power supply at room temperature is lower than the recommended value, and the lower the voltage, the smaller the power;
- The use of antennas is poorly matched with the module or the quality of the antenna itself.

3.2 Modules are easily damaged

- Please check the power supply to ensure that between the recommended supply voltage, if the maximum value is exceeded, it will cause permanent damage to the module;
- Please check the stability of the power supply, the voltage should not fluctuate greatly and frequently;
- Please ensure that the installation and use process of anti-static operation, high-frequency devices electrostatic sensitivity;
- Please ensure that the humidity during installation and use should not be too high, and some components are humidity sensitive devices;
- If there is no special need, it is not recommended to use it at too high or too low temperature.

3.3 The bit error rate is too high

- There is co-channel signal interference nearby, stay away from the interference source or modify the frequency and channel to avoid interference;
- Unsatisfactory power supply may also cause garbled characters, be sure to ensure the reliability of the power supply;
- Poor quality or too long extension wires and feeders will also cause high bit error rates.
